OBSERVE PRECAUTIONS
ELECTROSTATIC SENSITIVE
DEVICES

Pin	Identification	Type	Function specification
1	Over Voltage	Output	When the power supply voltage of the power amplifier exceeds the threshold, the power amplifier is turned off and this pin outputs a high level.
2	GND	Supply	Power supply negative
3	GND	Supply	Power supply negative
4	VCC	Supply	Power supply positive
5	VCC	Supply	Power supply positive
6	EN	Input	A high (or suspended) level 5V turns on the power amplifier, and a low level turns it off
7	Reset	Input	When the power amplifier triggers overcurrent protection, the power amplifier will be turned off and enter a state of lockout, and shorting to ground for 10ms will restart the power amplifier. Only the overcurrent protection can be reset.
8	Over Temp	Output	When the temperature of the power amplifier housing is greater than 70° C, the power amplifier is closed and this pin will output a high level. When the temperature of the power shell is reduced to 60°C, the power amplifier returns to normal operation, and this pin will output a low level.
9	Over Current	Output	When the power amplifier current exceeds the threshold, the power amplifier is turned off and this pin outputs a high level.
